

Game Title: Unreal Tournament: Skaarj Revenge

Rating: M

Platform: PC

Target Audience: 18-24 ARPG fans

Concept

Unreal Tournament: Skaarj Revenge is a single player third person action role playing game where the player plays as the lone survivor of the Skaarj invasion, which saw the human weapons useless, leading to a catastrophic defeat. Seeing Necris as the only way to save the planet they love, the player eats the heart of a dead Skaarj soldier and gains the power to fight back.

Summary

Twenty years have passed since the Human/Skaarj war ended. The yearly Unreal Tournament has evolved into a spectacle similar to the coliseum in ancient Rome. Humans forced the captured Skaarj soldiers into fighting each other for entertainment or as game for humans to hunt while spectators cheer. At the end of the Human/Skaarj war the leaders of the Skaarj retreated, faking their own deaths to create time to formulate a plan. They travel to a distant planet and force scientists to create a new Necris method to render human weapons useless against them. After spending years building an invincible army they return to finish the war.

Outline

Players fight the Necris Skaarj using close and long range combat focusing on dodging and countering enemy attacks. Weapons can be crafted and upgraded through the items obtained defeating enemies. Humans rescued from the Necris Skaarj can be recruited to join the fight providing additional party characters and performing special attacks together with the player. There are four Necris Skaarj generals and the Necris Skaarj leader players fight against. Each boss defeated grants the player a special ability by eating the enemies' heart, but overtime it slowly turns the player into a Necris.
